

TO: All Parties Interested in Participating in the Delaware Lottery's Request for Proposal for Video Lottery Terminals (FIN13002-VLTs)

FROM: Jim Logue
Deputy Director, Delaware State Lottery
RFP Issuing Officer

DATE: April 29, 2013

SUBJECT: Addendum 2 – Questions and Clarifications of RFP

ADDENDUM 2

The following questions and RFP clarifications are issued pursuant to Section 1.14 of the Video Lottery Terminals RFP.

Section 1.11

Would the Lottery consider extending the proposal due date to allow for more than 5 business days from when the lottery publishes its responses to bidder questions?

The due date remains as written in section 1.11.

Section 1.37

May bidders submit a version of their proposals in which the confidential/proprietary information has been redacted for the main Technical volume and a version of their proposals in which the confidential/proprietary information has not been redacted for the "Proprietary Information" volume?

Yes.

Section 2.49

Will existing equipment, currently in place, be acceptable in addition to manufacture's latest design? It is understood that all equipment offered shall be new and/or warranted as new.

Any equipment currently residing in each Agent's location that the Lottery chooses to retain is not required to be of the manufacturer's latest design. Any equipment that is provided as part of

this RFP that does not currently reside at each Agent's location must be of the manufacturer's latest design.

Section 3.1

Will the Lottery require bidders to provide Hardware Specifications in their response for existing product already known or operational in Delaware?

Hardware specifications are not required for VLTs currently residing in each Agent's location, only for new equipment offered as part of a bidder's proposal.

Section 3.1.21

If existing equipment is retained, are bidders to provide details on all current existing equipment in their response in addition to manufacture's latest design? It is understood that all modern and current manufactured terminals will be certified and that processing hardware, network connections, etc are new and/or warranted as new.

Bidders must certify that all proposed terminals, processing hardware, networking connections, diagnostic equipment, etc., including VLTs currently residing in each Agent's location, are new and/or warranted as new. Any equipment proposed that is not currently residing in each Agents' location must be modern and of current manufacture.
